

Chronic Fatigue Syndrome

About Sound Therapy:

Sound-based therapy involves the use of sound vibration that impacts the body using special equipment, programs, modified music, and/or specific tones/beats, the need for which is identified with appropriate testing.

About Chronic Fatigue:

Chronic Fatigue is characterized by unrelenting exhaustion, muscle and joint pain, cognitive disorders and other symptoms. The symptoms are highly variable and fluctuate in severity, complicating the ability to cope with the illness. Many of the symptoms are invisible, making it difficult for others to understand.

Therapies Offered:

AIT, Tomatis®, BioAcoustics™, and home programs. Therapies are only suggested after completing the Diagnostic Evaluation for Therapy Protocol (DETP®) which determines if any sound-based therapy is appropriate and when it is, in the correct order. We utilize *The Davis Model of Sound Intervention®*.

Sound-based therapies are not medical treatments. They do not cure or treat medical disease conditions. They work on supporting change in learning, development, and wellness. The work of The Davis Center is no substitute for a medical diagnosis and treatment.

Chronic Fatigue and Sound-Based Therapy

Sound-based therapy supports positive change with:

- Energy levels
- Muscle aches and pains
- Sleep patterns
- Word finding
- Mental Fogginess
- Reading Comprehension and Retention
- Sensitivity to light, sound and/or other sensory input
- Depression or anxiety
- Mood swings
- Balance and coordination issues
- Determination of body imbalances related to: Metal toxicities, biochemical issues, nutritional weaknesses, and muscle tone
