

Healthy Aging

About Sound Therapy:

Sound-based therapy involves the use of sound vibration that impacts the body using special equipment, programs, modified music, and/or specific tones/beats, the need for which is identified with appropriate testing.

About Healthy Aging:

Our brain declines with age if not challenged. By emphasizing the connections between the voice, the ear, and the brain with consistency over time, the brain's neuroplasticity is activated and processing skills increase, becoming more accurate for better responses. We stimulate the declining connections and awaken the body to living!

Therapies Offered:

A variety of sound-based therapies are appropriate for healthy aging: AIT, Tomatis®, HiFi Brain Fitness™, Interactive Metronome and BioAcoustics™. Therapies are only suggested after completing the Diagnostic Evaluation for Therapy Protocol (DETP®) which determines if any sound-based therapy is appropriate and when it is, in the correct order. We utilize *The Davis Model of Sound Intervention®*.

Sound-based therapies are not medical treatments. They do not cure or treat medical disease conditions. They work on supporting change in learning, development, and wellness. The work of The Davis Center is no substitute for a medical diagnosis and treatment.
