

Learning Disabilities

About Sound Therapy:

Sound-based therapy involves the use of sound vibration that impacts the body using special equipment, programs, modified music, and/or specific tones/beats, the need for which is identified with appropriate testing.

About Learning Disabilities:

Learning disabilities is a generic term that refers to a heterogeneous group of disorders manifested by significant difficulties in acquisition and use of listening, speaking, reading, writing, reasoning, or mathematical abilities, or of social skills. These disorders are intrinsic to the individual and presumed to be due to central nervous system dysfunction. (Interagency Committee on Learning Disabilities)

Therapies Offered:

AIT, Tomatis®, Fast ForWord™, Interactive Metronome™, Bio-Acoustics™, and home programs. Therapies are only suggested after completing the Diagnostic Evaluation for Therapy Protocol (DETP®) which determines if any sound-based therapy is appropriate and when it is, in the correct order. We utilize *The Davis Model of Sound Intervention®*.

Sound-based therapies are not medical treatments. They do not cure or treat medical disease conditions. They work on supporting change in learning, development, and wellness. The work of The Davis Center is no substitute for a medical diagnosis and treatment.
