

# Personal Growth

## About Sound Therapy:

Sound-based therapy involves the use of sound vibration that impacts the body using special equipment, programs, modified music, and/or specific tones/beats, the need for which is identified with appropriate testing.

## About Personal Growth:

It is possible to expand your capacity for growth and learning at any age. First one needs the functional ability to perceive and process information effectively and then be motivated to act on the information. Positive Listening skills allow us to tune in to what we want to hear and tune out what is not necessary. Sound vibration can be used in a transformational process of self-discovery and personal evolution.

## Therapies Offered:

A series of sound-based therapies are appropriate for personal growth: AIT, Tomatis®, and BioAcoustics™. Therapies are only suggested after completing the Diagnostic Evaluation for Therapy Protocol (DETP®) which determines if any sound-based therapy is appropriate and when it is, in the correct order. We utilize *The Davis Model of Sound Intervention®*

Sound-based therapies are not medical treatments. They do not cure or treat medical disease conditions. They work on supporting change in auditory processing, learning, development, and wellness. The work of The Davis Center is no substitute for a medical diagnosis and treatment.
